EXECUTIVE COMMITTEE - ISAVAL

# Pill 3 - DATA

Executive summary to accelerate AI adoption among non-IT profiles

## Context

The organization already shows clear reactions: IT is moving very fast, management shows different adoption rhythms, and a second layer is starting to produce first pilot cases.

> January-February 2026 already feels far away. The challenge is to be ready to surf this wave faster and better than competitors.

## What this stage IS

**REAL TRANSFORMATION**

This is not about flashy output. It is about transforming how we work.

**BUSINESS FIRST**

Nobody is asked to become a programmer; people are asked to detect friction and opportunities.

**NEW LOGIC**

Business identifies the opportunity, proposes output, and IT hardens, integrates and scales.

**NETWORK EFFECT**

Improvements move from arithmetic to geometric once shared across teams.

## 4 alignment messages

| Message | Executive reading |
|---|---|
| It is not magic | It is operational capability to redesign processes, not a tool trend. |
| It is not about coding | It is about business understanding, prioritization and using AI agents. |
| It is not optional | Ignoring this wave reduces competitiveness in speed, cost and decision quality. |
| Do not wait for perfect training | Initiative is required: explore, pilot, fail fast and iterate. |

## Core message: DATA

- Without correct, collected and curated data there are no sustainable AI results.
- Data quality is critical raw material for every next step.
- Demand for data volume and quality will keep increasing.
- Data care must become a cross-functional discipline.

**Executive conclusion:** immediate advantage will not come from having more AI tools, but from stronger business criteria and higher data quality to scale pilots into solutions.
